01

Advantages of PVC wall panels

In recent years, various wall decoration materials have emerged in the field of building decoration materials, PVC wall panels are undoubtedly the best among them. There are the following specific advantages:

一、Ultra high environmental performance

PVC wall panels have the characteristics of zero formaldehyde, no heavy metals and harmful substances, and meet the standard for vinyl chloride monomer volatilization. It is a truly environmentally friendly wall decoration material.

二、Quickly define and decorate your space

Compared with various wall materials on the market, the installation method of PVC wall panels in the decoration process is to use main materials (PVC wall panels)+metal lines+silicone structural adhesive and other materials for installation, which can quickly and comprehensively decorate a new space in a short time.

三、The surface decorative materials are incredibly rich and colorful

The surface of PVC wallboard can not only fit the traditional PVC film, such as wood grain, cloth grain, skin sensory, matte marble grain, etc., but also fit the high gloss PET films: including PET single color, PET flashfilm, PET high gloss marble film, PET metal film, mirror film, etc. In addition, it can also fit food grade PP film, leather and other surface materials. It meets the aesthetic and pursuit of most people for new wall decorations.

四、Diversified installation methods

PVC wall panels can be installed directly on the wall without a base layer. During this installation process, we can use method of metal lines+PVC wall panels+structural adhesive to install, and can also slot the PVC wall panels first to install. The slot can make simple T&G slot, T&G click, G&G click, etc. With the help of auxiliary materials such as stainless steel clip and metal lines, we can make seamless effect.

02

PVC wall panel product features

1. Clear texture: PVC wall panels have the characteristics of fresh color, clear texture, UV protection, and long-lasting color retention.

2. Health and Environmental Protection: PVC wall panel is a high-density PVC substrate, which is bonded with imported PUR hot-melt adhesive and has the characteristic of zero formaldehyde emission.

3. Balance and stability: Micro foamed PVC wall panels (including carbon crystal panels and super hard WPC panels) are a three-layer structure with excellent stability. The production of SPC wall panels is with high density, and they are produced using rolling technology, which also has excellent balance stability.

4. Moisture and moth prevention: The main material composition of PVC wall panels is PVC resin powder, which has excellent waterproof performance and excellent anti-insect function.

5. Diverse styles: PVC wall panels have the characteristics of various colors and free sizing, which can meet the decoration needs of various styles.

6. Strong compression resistance: The PVC wall panel substrate has the characteristics of high strength, strong compressive strength, and good buffering performance.

7. Clear texture: PVC wall panels can be installed using exposed I-bar installation method, hidden I-bar (G&G click) installation method, and T&G (lock buckle/flat buckle) installation method, etc.

8. Easy to manage: PVC wall panels have the characteristics of flame retardancy, burn resistance, scratch resistance, stain resistance. It's easy cleaning and maintenance.

03

Types of PVC wall panels

Our PVC wall panels are classified by substrate, and there are the following categories:

<一>、Carbon crystal board

The carbon crystal board substrate is a three-layer structure, with white crystal ceramic layers on the front and back, and a black core layer of bamboo carbon fiber layer in the middle. There are generally two thicknesses: 5mm and 8mm. The density of 5mm carbon crystal plate is 0.75; 8mm carbon crystal plate is divided into two densities, 0.65 and 0.75, according to the surface bonding film. The 0.65 density substrate is suitable for pasting of all PVC films, the 0.75 density substrate is suitable for pasting of all PET/PP films, and the U-groove wrapping process of all PVC films.

<二>、Super hard WPC panel

The base material of the super hard WPC panel is also a three-layer structure. The front and back are white diamond layers with a thickness of 1.2mm. The white core layer in the middle is a micro foam layer. The thickness of the super hard WPC panel generally comes in two types: 5mm and 8mm. The density of the 5mm super hard WPC panel substrate is 1.0; The density of the 8mm super hard WPC panel substrate is 0.9. Both two thicknesses of substrate are suitable for flat pasting process of all PVC/PET/PP films, and 8mm substrate is suitable for U-groove wrapping process of PVC films. As a newly developed product in the past two years, the super hard WPC panel has the characteristics of good impact resistance, good stability, good appearance, and superior environmental performance.

<三>、SPC wall panel

Our company's SPC wall panel generally comes in three thicknesses: 3mm, 4mm, and 5mm, with a density of 2.1. SPC wall panel are suitable for flat pasting of all PVC/PET/PP films. At the same time, SPC wall panel with PVC decorative film skin can choose to add an additional UV roll coating process. The UV coated SPC wall panel is wear-resistant and stain resistant, widely used in spaces such as bathrooms and staircases. It has the characteristics of good surface hardness, strong impact resistance, no peeling, and no color fading. 4mm/5mm SPC wall panel can also be slotted and install to seamless.

APPLICATION OF MATERIALS
MAKE SPATIAL AESTHETICS WITHIN REACH

01 Indoor home decoration

02 Decoration of star rated hotels and chain hotels

03 Renovation of hospitals,schools,and government telated institutions

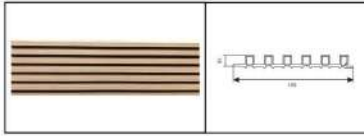

04 Decpration of commercial spaces,boutique specialty stores,etc
